

Getting Started With Concourse

Steps:

1. Install the following tools:
 - 1.1. [Xampp](#) or any similar tool
 - 1.2. [Docker](#) and [Docker Compose](#)
 - 1.3. The [fly](#) binary.
2. When logging in, I found that most tutorials used “admin” for the username and password of [127.0.0.1:8080](#), however, it did not work for me. After a bit of research, I found a LinkedIn post that used “test” for the username/password and it worked. I recommend trying both and see which works.

Please refer to the sources bellow for better understanding. This is merely a very simple and short guide to save you time as I spent a long time finding appropriate resources.
